Asset management is a challenging yet crucial task. GoodBooks EAM makes it a cinch for you. Our software gives you detailed information of the status of each asset for proper utilization, optimization and reduction of costs, no matter wherever it resides.

— Maximize Overall Value

Asset visibility and tracking of the actual on-field performance of assets including plants, machines, equipment, and vehicles are made possible by GoodBooks EAM, thereby minimizing downtime and maximizing asset performance. It means you will have better control over assets spread across various levels at different locations. Easily avoid unexpected breakdowns through promptly scheduled maintenance. Even preventive maintenance is possible with advanced analytics offering intelligent insights. Overall, asset performance improves, further reducing downtime and costs. All the functions are integrated to your financial modules to provide you with metrics and reports for Decision Support System.

— Configurable & Super flexible!

Unique to GoodBooks EAM

GoodBooks software is simple and intuitive to use while being highly customizable. It is even configurable by users which means they can do it without any technical support from us. Customers can set and change parameters whenever they desire, making GoodBooks extremely flexible. Customizable dashboards, intuitive menus, user-defined as well as default fields to fill, charts generation for analytics, scheduled direct mailing to management for Decision Support System, and complementary mobile app make GoodBooks EAM the preferred choice.
