PRODUCTION

THE *PULSE* OF *PRODUCTION*
AT YOUR FINGERTIPS

GoodBooks
Measure. Manage. Maximise.

Unisoft System Consultancy

Manufacturing processes are often complicated, no matter what the size of the operations. Keeping tabs on what is happening in real-time on the shop or production floors is key to enhance the productivity, performance, and profitability of your business. GoodBooks Production ERP lets you do that and much more.

Production Challenges

Without a champion production ERP like that of GoodBooks, many manufacturers wilt under the pressure of factors such as:

- Short-run fluctuations

- Competition from domestic and global supply chains

- Lack of visibility across entire ecosystems

- Piling up data that is unmanageable

- Rising customization needs from clients

Benefits of GoodBooks Production ERP

GoodBooks Production ERP constitutes an end-to-end digital enterprise architecture that can digitalize production processes across a range of big and small industries, to offer radical benefits:

Dynamic Production Planning

Always stay abreast of what's being produced on your production floor. Control the production process using our dynamic production planning and scheduling tools made available on your computer, tablet, and mobile. Get accurate schedules based on your actual capacity, material, and delivery requirements. Avoid over or under production, and meet demands evenly, and on time.

Have Product Visibility

Easily track each product to trace it to its relevant process stage. For example, even trace the precise problem process in case any batch of the sold product is rejected by the final buyer for any defect if any. This is made possible by separate batch numbers for the same product in different production stages. View real-time task updates, monitor key metrics, and keep everything on track with project dashboards.

Anytime Anywhere Access

Wherever they are located in the world, employees will know what to produce and how. Regardless of your location, you can create a work schedule, and share it with the shop floor. Without leaving their workstations, plant floor workers can use their tablet or smartphone to update job status. Managers can create BOMs or issue change orders from their office or out of it.

Digital Dynamism

Whatever be the complexity of your production process, our dashboard automatically portrays project data in easy-to-read, intelligent charts, so you get total transparency into projects. Drawings, documentation, and notes can be attached for further clarity. The need for note books and paper work cards are eliminated. Use our simple online templates to register work in progress. Prioritize operations using drag-and-drop graphical blocks. Real-time dashboards and alerts can trigger timely action against potent problems.

Optimize Production

With work history, work in progress, and work efficiency right in front of you have a firm grip on wastage, stoppage, and productivity. This will empower you to make fast, informed decisions, which will ensure that valuable experience and skills are used effectively to optimize the overall production operations for greater efficiency and lower costs. The latter is crucial since products at a lower cost than the competition is often the difference between survival and failure.
